

Stool Assembly Instructions

**Congratulations on your purchase of the Living Earth Crafts Levitate stool.
The following instructions will guide you through each step of assembly.**

1. Verify all inventory parts as noted in the diagram.
2. Insert wheels into stool base. Seating them securely may take some force. Place stool base on the floor with wheels facing down.
3. Place the large metal end of the pneumatic metal cylinder into the round opening in the top of the stool base, thin side of cylinder facing up. Use minimal force to secure the cylinder into the base.
4. Insert seat onto the top of the pneumatic metal cylinder. Carefully sit down on the seat until the cylinder locks in place.
